

Netkrom

Wireless Solution for Government

Many Governments if not all in the world are always under pressure to provide their citizens with the upmost care and services. It is essential for a government to have the ability to share information across multiple locations while maintaining a fast, secure and reliable network.

By using Netkrom's products you will discover the full benefits of embracing Broadband Wireless Technology. Wireless Point-to-Point and Point-to-Multipoint Solutions are ideal for Governments that require sharing policies, secure databases, financial documents, desktop applications and other important data quickly and efficiently across two or more remote locations, such as police stations, fire halls, libraries, administration offices, city hall departments, or hospitals. At the same time, these solutions are suitable to deploy video surveillance networks for public safety applications.

Wireless Networks likewise are also well suited for government-led community based networks which would provide high speed Internet access to businesses and residences in urban and rural regions.

Benefits of Broadband Wireless Technology

- Low cost Installations
- Turn-Key Network Solutions
- High-Speeds & Dependable bandwidth.
- Reliable Equipment.

Inexpensive Installation, **no More line Charges**

Broadband Wireless Connectivity provided by Netkrom can be installed quickly and inexpensively because there are no wires involved. As well, there are also no costly telephone company monthly line charges to pay or telephone company service delays to endure.

Track **Record**

Netkrom's history and outstanding record of success stories with Wi-Fi, Mesh and WiMax equipment has been shown by assisting Government Institutions in various countries and recognize the benefits that wireless connectivity can offer. Netkrom's products have been used in a vast variety of solutions around the world.

High-Speed, **Reliable Bandwidth**

Netkrom's wireless products are perfect for Government Organizations because they are fast, reliable, secure, and provide an ample amount of bandwidth between different Government branches for video surveillance applications. By using Netkrom's technology, interference is minimized ensuring a more than stable service over long distances with increased data rate speeds over 100 Mbps.

Worldwide **Support**

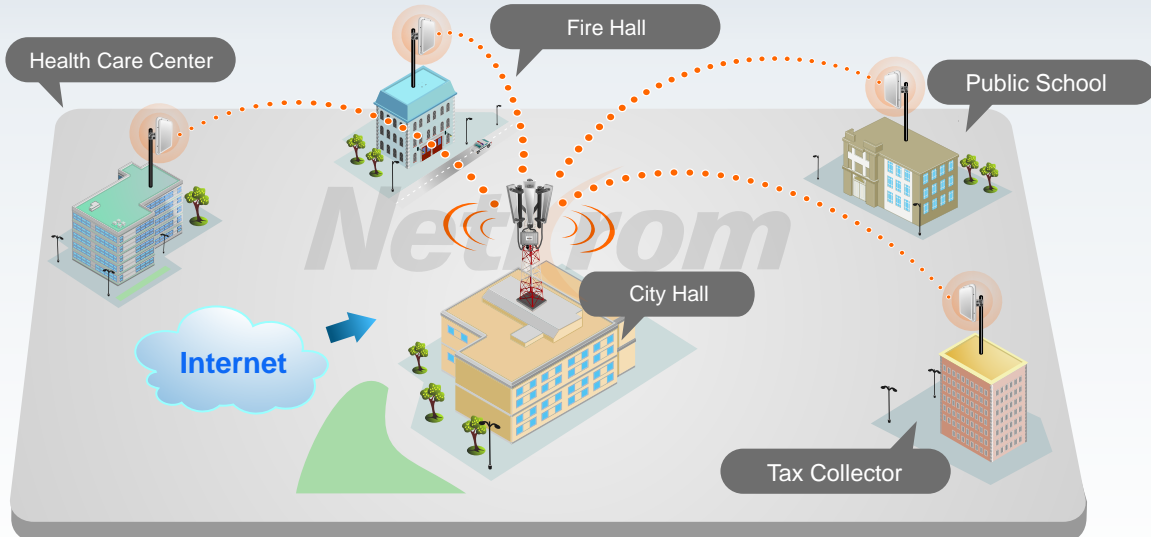

Netkrom along with its numerous partners worldwide offer you everything necessary to start, set up, and administrate "Building-to-Building" wireless network solutions and Video over IP surveillance systems. Assistance can additionally be provided in the equipment integration of existing network equipment if need be since the process only take no more than a few hours.

The Only **Equipment Required**

Netkrom's point-to-point and point-to-multipoint products are the only equipment needed in order to deploy and provide a high speed wireless network. With the use of only one solution, government organizations will save time and money on installation, total network costs, and the hassle of dealing with multiple wireless equipment vendors.

Application

Remote Interconnection

Local Government needs to provide high-speed Internet Access, and access to the private data to every Government Department in the region. By using Netkrom Wireless products, the Local Government deployed a Point-to-Multipoint solution that interconnected City Hall with the associated departments addressing successfully the main objective.

Application

Traffic Control and Video Surveillance

Local Governments need to deploy Video Surveillance systems to provide their citizens with the necessary safety they require as well as monitor the traffic and public transportation to optimize it and reduce pollution. By using Netkrom Wireless products, the Government Organization deployed successfully a Video Surveillance solution monitoring the whole city in a centralized manner.
